

## Additional information on Labels where the contents do not exceed 10ml

For the labelling of inner packaging where the contents do not exceed 10 ml, the font size may be smaller than indicated in Table 1.3, as long as it remains easily legible, where it is deemed important to place the most critical statement, such as a hazard statement or EUH statement, and where the outer packaging meets the requirements of Article 17.'

The label elements required by Article 17 may only be omitted from the inner packaging where the contents of the inner packaging do not exceed 10 ml and any of the following applies:

- a) the substance or mixture is placed on the market for supply to a distributor or downstream user for scientific research and development or quality control analysis and the inner packaging is contained within outer packaging that meets the requirements set out in Article 17
- b) the substance or mixture does not require labelling in accordance with Part 1 or 2 of Annex II and is not classified in any of the following hazard classes and categories:
  - i. acute toxicity, any category
  - ii. specific target organ toxicity – single exposure, categories 1 and 2
  - iii. specific target organ toxicity – repeated exposure, any category
  - iv. skin corrosion, category 1, any sub-category
  - v. serious eye damage, category 1
  - vi. respiratory sensitisation, any category
  - vii. aspiration hazard
  - viii. germ cell mutagenicity, any category
  - ix. carcinogenicity, any category
  - x. reproductive toxicity, any category
  - xi. endocrine disruption for human health, any category
- c) the substance or mixture requires labelling in accordance with Part 1 or 2 of Annex II but is not classified in any of the hazard classes and categories referred to in point (b) of this section (above) and has an inner packaging that is contained within outer packaging that meets the requirements set out in Article 17.'

Where the packaging of a substance or a mixture is either in such a shape or form or is so small that it is impossible to meet the new requirements, the label elements set out in Article 17(1), may be provided on a tie-on tag or on an outer packaging.

However, the label on any inner packaging shall contain at least the hazard pictograms, the signal words, the product identifier for substances or the trade name or designation in Article 18(3), point (a) for mixtures, as well as the name and telephone number of the suppliers of the substance or mixture.'
